Overview

Purchasing is an incredibly powerful tool to request parts and keep track of spending and Parts usage. Using Purchasing with the AIMS 3 integration tools can help organizations take their record keeping to the next level. Purchasing enables Administrators, the ability to customize how they track Part requisitions through Data Managers with custom requisition numbers, statuses, and functions. With the addition of Not To Exceed amounts and Approvals, Purchasing became more powerful! It is important for Administrators to familiarize themselves with the Data Managers and System Setup to receive the largest return on investment.

This document will help Administrators understand Data Managers and System Setup and then explain Purchasing through the lifecycle of a Parts order. Finally, the new functionality is discussed. This will start in the Work Order, through Purchase Requests, the Purchase Order, and then back to the Work Order. Since integrations are rarely the same, Administrators are encouraged to arrange a discussion with an AIMS 3 Consultant to best address the organization's needs.

In addition, the necessary data managers must be configured for the Purchasing Component to display data in its dropdown menus. Refer to the Data Managers How-To Guide for information on the required data managers and configuration steps.
The same can be said for System Set Ups and Purchasing Options. Refer to the System Setup Component for more information.

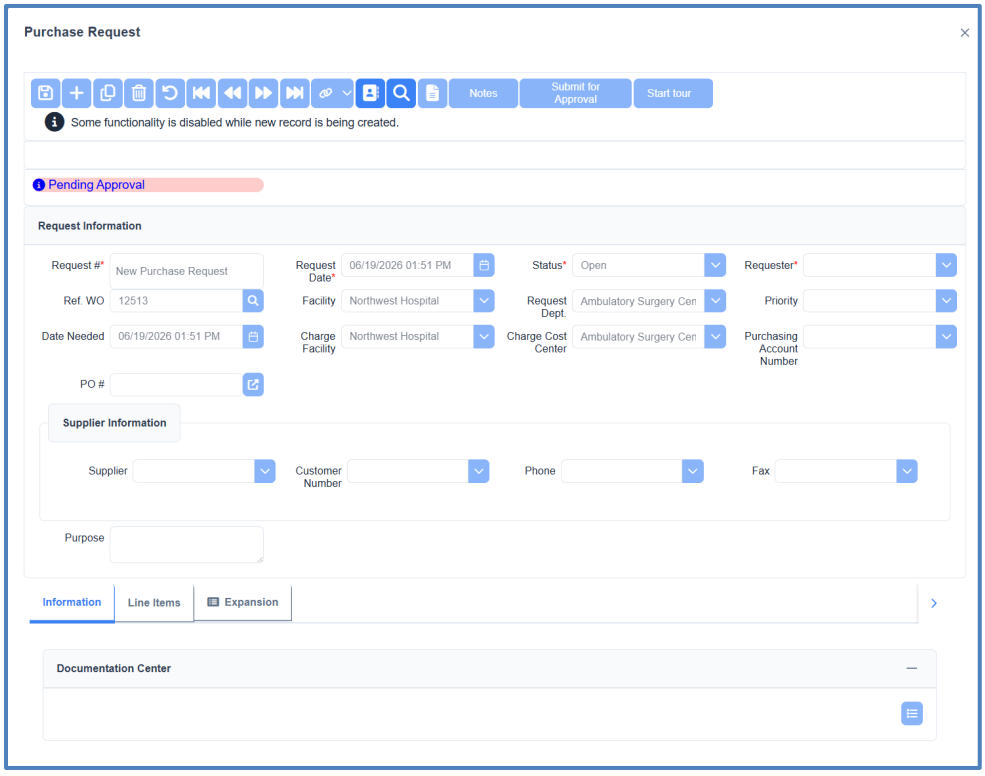

Note: There are other components that also refer to the Purchasing Component. To see how this interacts with the Home Screen, please see our How-To Guide: The Home Screen.

CLASSIFICATION: FOR PUBLIC USE

Creating a Purchase Request from a Work Order

Normally, Purchase Requests are created from Work Orders. If a Part is not in stock, it must be requested. In addition, it is helpful to know from which Work Order the request came when the Part arrives. Purchase Requests can help Administrators keep track of this through the submenu item “Purchase Requests” under Purchasing. Once the Administrator has reviewed the Purchase Request, they can approve them and create Purchase Orders. Purchase Requests can be made through the “New” function from within the Purchase Request submenu, but a majority will come straight from Work Orders.

From an “Active-type” Work Order, users can create a Purchase Request from the Taskbar. It is encouraged to apply Materials through the Purchase Request and not directly on the Work Order. The Purchase Request will automatically add them to the Work Order.
In the popup window, the user will see the Purchase Request Taskbar, the Request Information Section, and the Line Items tab.

CLASSIFICATION: FOR PUBLIC USE

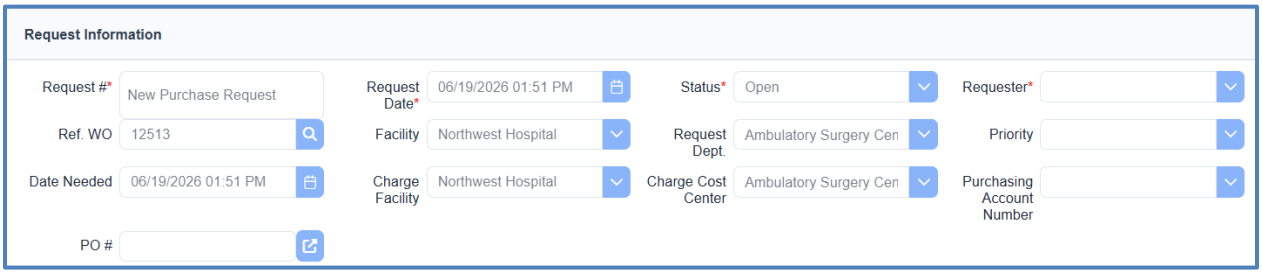

Request Information

The Request Information section will be partially completed with information from the Work Order and System Setting Defaults. The User can additionally enter:

- Request # - The unique identifier of the Purchase Request
- Request Date – The date the Purchase Request was entered into the system
- Status – The Status of the Purchase Request
- Requester – If not filled in automatically through Data Managers->Employee Settings
- Ref WO – The Work Order associated with the Purchase Request
- Facility – The Facility associated to the Work Order tied to the Purchase Request
- Request Dept – The Cost Center associated to the Work Order tied to the Purchase Request
- Priority – The Priority will help set the Data Needed
- Date Needed – This is the date the Parts are needed by
- Charge Facility – The Facility responsible for the billing of the Purchase Request
- Charge Cost Center – The Cost Center responsible for the billing of the Purchase Request
- Purchasing Account Number – The Account Number associated with the Cost Center
- Supplier – This is to indicate a preferred Supplier
- Customer Number – Unique billing code of the Supplier
- Phone – Main phone number used for the supplier
- Fax – The Fax Number used for the supplier
- Purpose – The User can clarify why the Material is needed if it not clear

Note: some of these fields are not a part of the Data Managers component and will need to be converted in order to be used.

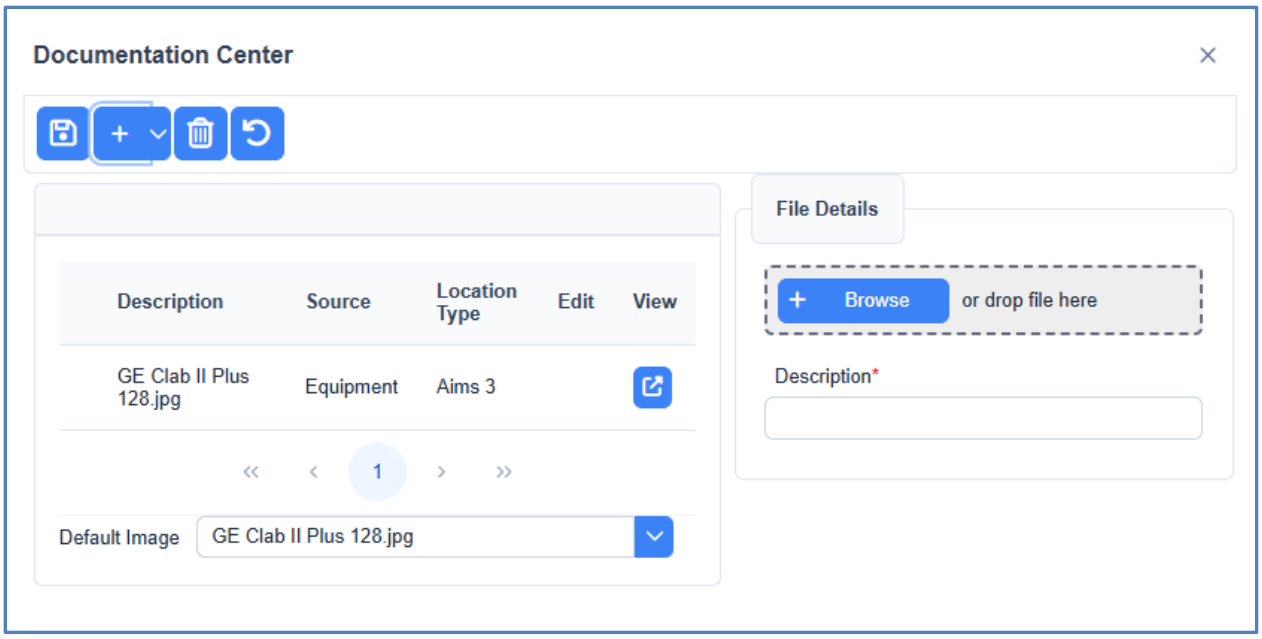

After this information is entered, the user can optionally include Attachments at the bottom of the tab.

Attachments

The Attachments grid contains all files and photos pertaining to this Purchase Request. Click the New button to add a new file. Under File Details, click the Browse button and locate the file to be added or drag the file from a file explorer. Administrators can add an optional description. If it is an image file, it can be selected as the default image under the list of files.

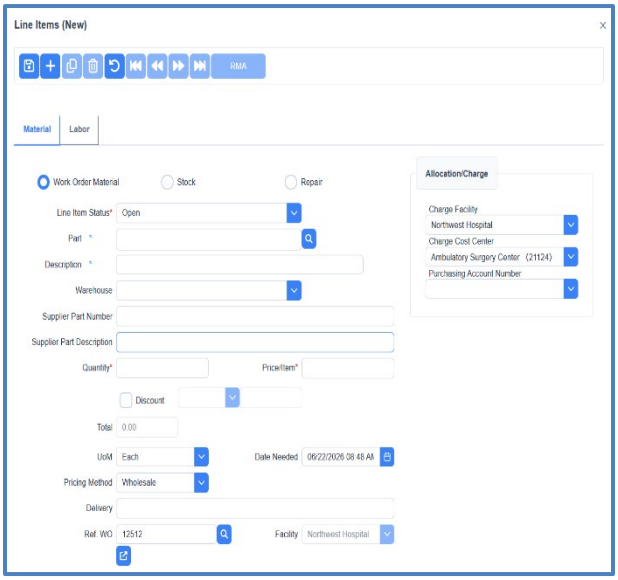

CLASSIFICATION: FOR PUBLIC USE

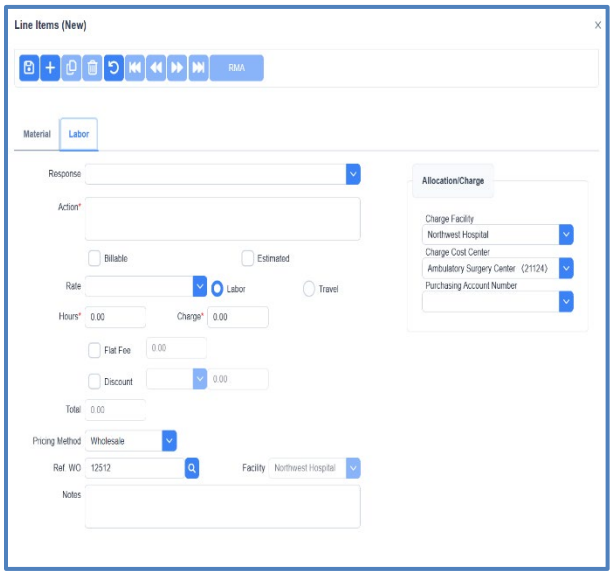

After this information is entered, the User must save the Purchase Request to enter Line Items.

Line Items

Line items can include Parts or Labor. The Parts can be from the Parts component, or they can be manually entered "on-the-fly." Should an "on-the-fly" Part get converted to a record in the Parts component, it can be edited to reflect the new entry. Labor can be requisitioned as well, such as Managed Services. The time should appear in the Line Item how it is expected to appear in the Work Order. This includes the Response and Action fields.

Line-Item Parts

To enter a Part as a Line Item, the User must click the Add Button under the Line Items tab. This will prompt a pop up. For Parts, the user will first need to determine whether or not this will be for the Work Order associated with the Purchase Request, if this is for "Stock," or if this will be used for a Repair. The user will also see that that the Line-Item Status will be prefilled to "Open" and will change statuses as the workflow of the Purchase Request is fulfilled. Users may also notice that there will be two blue asterisks by the "Part" and "Description." It is imperative that the correct field is entered. If this is a part that is tracked inside of the system, then users will be enter the unique identifier of the Part Number in the "Part" section. If this will be a part that is not tracked in the database, users will be able to enter the description of the part in the "Description" section.

Note: Users can enter temporary information in this area and can be changed later either on the Work or Purchase Orders.

Note: Part and Description are accompanied by a blue asterisk. This means either one of the fields has to be completed in order to add the line to the Purchase Request.

Once the Part information is entered, if is recommended the User select a Warehouse for the Part's destination. This will help with the receiving process. After this, the User must enter a Price Per Item (if not filled automatically) and a Quantity. If your organization

CLASSIFICATION: FOR PUBLIC USE

tracks Line Items to the supplier they will be able to input the Supplier Part Number and Supplier Part Description.

Note: Part Supplier Number and Description will not be prefilled and will need to be entered manually.

The referenced Work Order is automatically filled in but could be changed if needed. Clicking the Save button adds the line to the Purchase Request. After all Line Items are completed, the User must click the Save button to save the Purchase Request, and the Materials will be added to the Work Order.

Line-Item Labor

To enter a Line Item for Labor, the User must click the Add Button under the Line Items tab. This will prompt a popup. The User must then click on the Labor tab. The User must enter the Labor as they want it to appear on the Work Order, starting with Response and Action. They can declare the Labor as Billable. Next the Rate needs to be set and declare whether the Labor is "Labor" or "Travel." The purchased number of hours must be filled in as well as the Charge and whether it is a Flat Fee or not. The ability to give a Discount as a dollar amount or percentage is available, if needed. If the exact dollar amount is not available, the User can declare the amount as "Estimated." Then the User can declare the Purchasing Pricing Amount. The Reference Work Order Number field should automatically be filled in but can be changed. Finally, a Notes field is available to describe the nature of the procurement.

After the Line Items have been entered Users should review the Expansion Fields to ensure there are no required fields to be completed.

Saving the Purchase Request is the final step before closing the window.

Note: All Labor Line-Item Entries will be defaulted to 1 hour but can be changed if needed.

CLASSIFICATION: FOR PUBLIC USE

Creating a Purchase Request without a Work Order

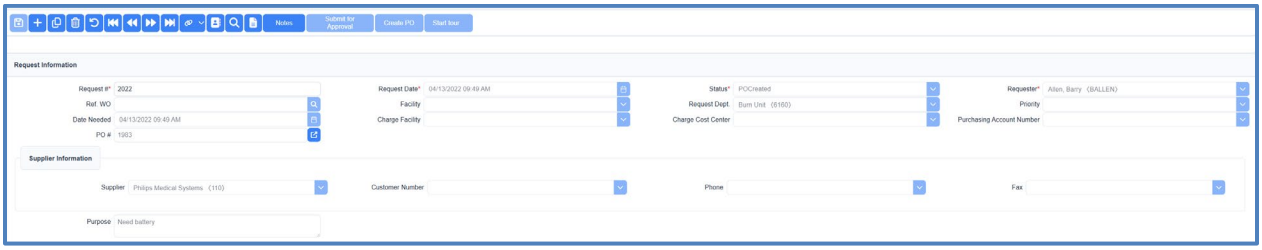

Purchase Requests can be created without a Work Order, and the process is similar. To create a Purchase Request without a Work Order, the User clicks the Purchasing module in the menu on the left and then selects the Purchase Request submenu. The User then clicks the "New" button to bring up a blank form.

Request Information

The Request Information section will be partially completed with information from the Work Order and System Setting Defaults. The User can additionally enter:

- Requester – If not filled in automatically through Data Managers->Employee Settings
- Priority – The Priority will help set the Data Needed
- Date Needed – This is the date the Parts are needed by
- Supplier – This is to indicate a preferred Supplier
- Purpose – The User can clarify why the Material is needed if it not clear
- Ref. WO – This links the Purchase Request with a Work Order
- Request Dept. – This allows the User to enter a requesting department
- PO # - This number is entered from the Purchase Order, when created

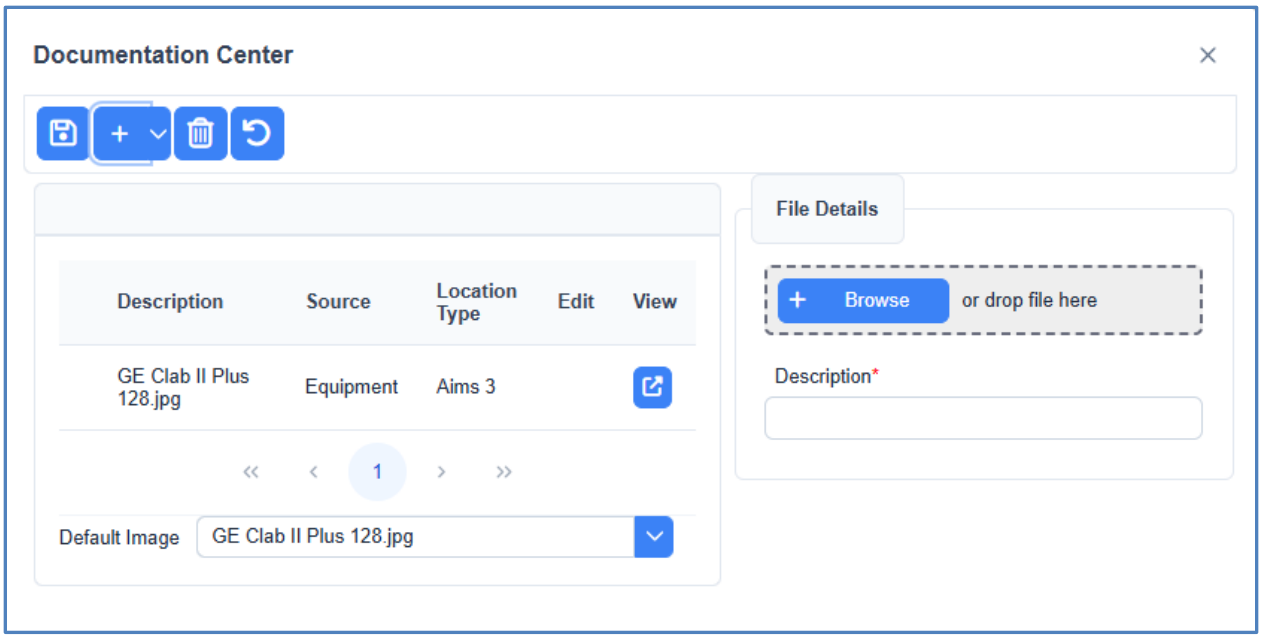

Note: To see a full list of what is found on this page please refer back to pages 14 & 15

Attachments

The Attachments grid contains all files and photos pertaining to this Purchase Request. Click the New button to add a new file. Under File Details, click the Browse button and locate the file to be added or drag the file from a file explorer. Administrators can add an optional description. If it is an image file, it can be selected as the default image under the list of files.

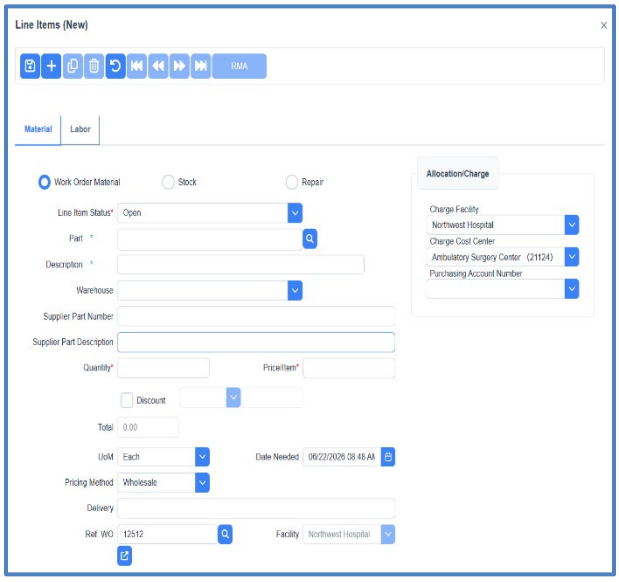

CLASSIFICATION: FOR PUBLIC USE

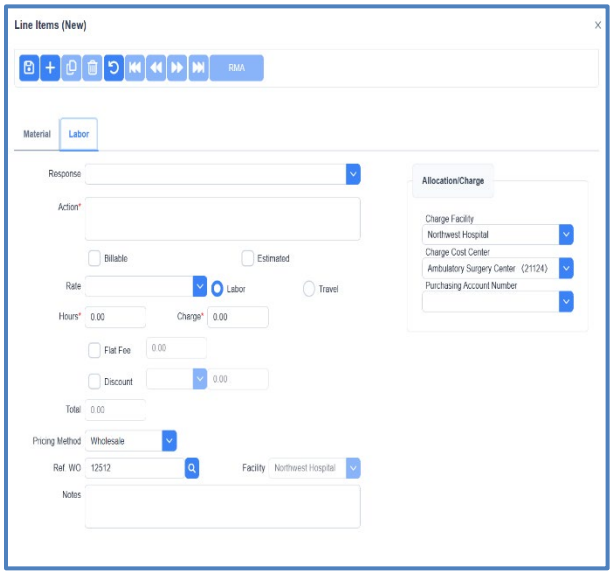

After this information is entered, the User must save the Purchase Request to enter Line Items.

Line Items

Line items can include Parts or Labor. The Parts can be from the Parts component, or they can be manually entered "on-the-fly." Should an "on-the-fly" Part get converted to a record in the Parts component, it can be edited to reflect the new entry. Labor can be requisitioned as well, such as Managed Services. The time should appear in the Line Item how it is expected to appear in the Work Order. This includes the Response and Action fields.

Then the User can declare the Purchasing Pricing Amount. The Reference Work Order Number field should automatically be filled in but can be changed. Finally, a Notes field is available to describe the nature of the procurement.

CLASSIFICATION: FOR PUBLIC USE

After the Line Items have been entered Users should review the Expansion Fields to ensure there are no required fields to be completed.

Saving the Purchase Request is the final step.

Note: All Labor Line-Item Entries will be defaulted to 1 hour but can be changed if needed.

CLASSIFICATION: FOR PUBLIC USE

Reviewing/Approving Purchase Requests

After Purchase Request are created, they are then reviewed and then added to a Purchase Order. Purchase Requests can contain several Line Items. In addition, there may be several Purchase Requests with items from the same Supplier. These multiple Purchase Requests can then be added to a single Purchase Order.

Depending on the organization's workflows, the process for reviewing Purchase Requests can differ greatly. It is important for all Users to understand what limitations (if any) has been placed upon them in the software. The two major methods to submit Purchase Requests are:

- Reviewing Purchase Requests WITHOUT needing Approval, and
- Reviewing Purchase Requests WITH needing Approval

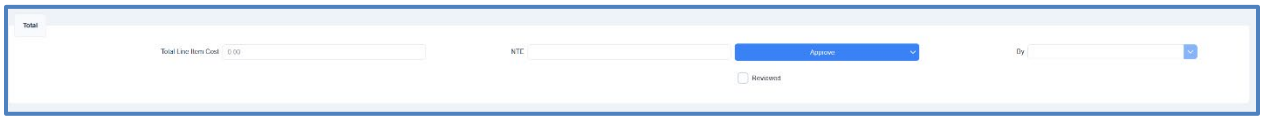

Reviewing Purchase Requests WITHOUT needing Approval

To review a request without needing Approval, the Reviewer inspects the Purchase Request for accuracy. After a Purchase Request has been reviewed, it is important for the Reviewer to change the status to a status which has the Type "PO Ready." These statuses can be reviewed under Data Managers->Purchase Request Status.

Reviewing Purchase Requests WITH needing Approval

Before a Purchase Request can be approved, Approvers need to be established in the Employees Data Manager.

To review a request with needing Approval, the Reviewer inspects the Purchase Request for accuracy. If the Line Items are approved for purchase, the Reviewer must click on the Line Items tab and click the "Approve" button.

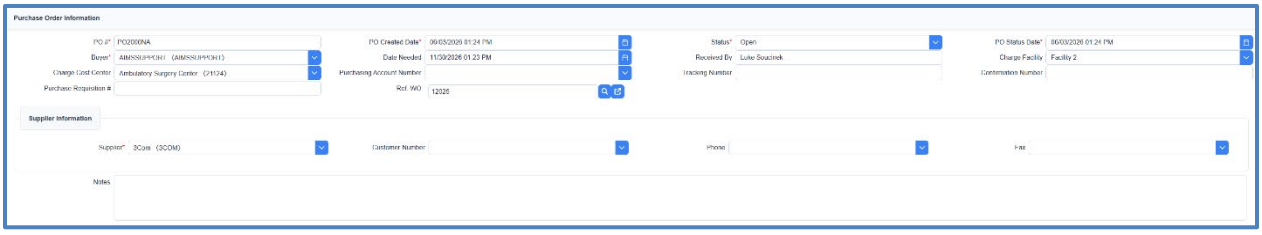

After a Purchase Request has been approved, it is important for the Reviewer to change the status to a status which has the Type "PO Ready." These statuses can be reviewed under Data Managers->Purchase Request Status.

CLASSIFICATION: FOR PUBLIC USE

Creating a Purchase Order from One or More Purchase Requests

This section will review creating a Purchase Order from one or more Purchase Requests. After selecting the Purchasing module in the menu on the left, users can view Purchase Orders by selecting the “Purchase Order” submenu. The User then clicks the “New” button to bring up a blank form.

Purchase Order Information

The Purchase Order Information section will be partially completed with certain information from the System Setup->Purchasing Options Defaults. The User can additionally enter:

- PO# - If sequential numbering is not turned on, the user must enter a unique identifier.
- PO Created Date – The date the Purchase Order was created.
- Status – This should default; however, if blank, the user must set this field.
- PO Status Date – The date the status changes on the Purchase Order.
- Buyer – Shows who placed the order. This can automatically be set up using Data Managers->Employee Settings.
- Date Needed – This could be inherited from Purchase Requests but can also be manually set.
- Received By – A free text field to show who received the PO.
- Charge Facility – The Facility responsible for the billing of the Purchase Order.
- Charge Cost Center – The Cost Center responsible for the billing of the Purchase Order.
- Purchasing Account Number – The unique identifier for the Cost Center account codes.
- Tracking Number – When the PO is ordered, this field can show the shipping tracking number.
- Confirmation Number – This could hold any confirmation number provided by the Supplier.
- Purchase Requisition Number – This can be an alternate number for the PO.
- Ref. WO – The Work Order Associated with the Purchase Order.
- Supplier – This is to indicate a preferred Supplier
- Customer Number – Unique billing code of the Supplier
- Phone – Main phone number used for the supplier
- Fax – The Fax Number used for the supplier
- Purpose – The User can clarify why the Material is needed if it not clear

CLASSIFICATION: FOR PUBLIC USE

Note: some of these fields are not a part of the Data Managers component and will need to be converted in order to be used.

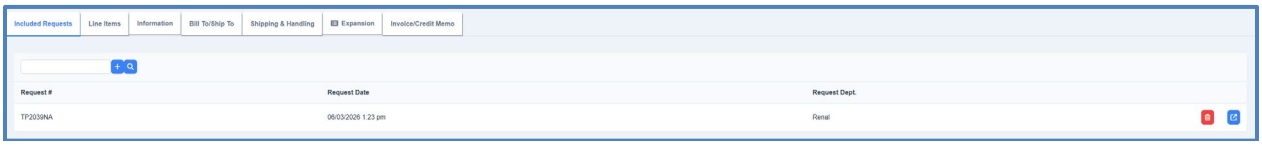

- Notes – This holds any administrative notes regarding the PO.

Underneath the Purchase Order Information are additional tabs:

- Included Requests
- Line Items
- Information
- Bill To/Ship To
- Shipping and Handling
- Expansion
- Invoice/Credit Memo

Included Requests

After an initial save of the Purchase Order, Included Requests can then be entered into the Purchase Order. Purchase Request numbers can be typed into the blank field and then the User clicks the "Add" button to add the request to the order.

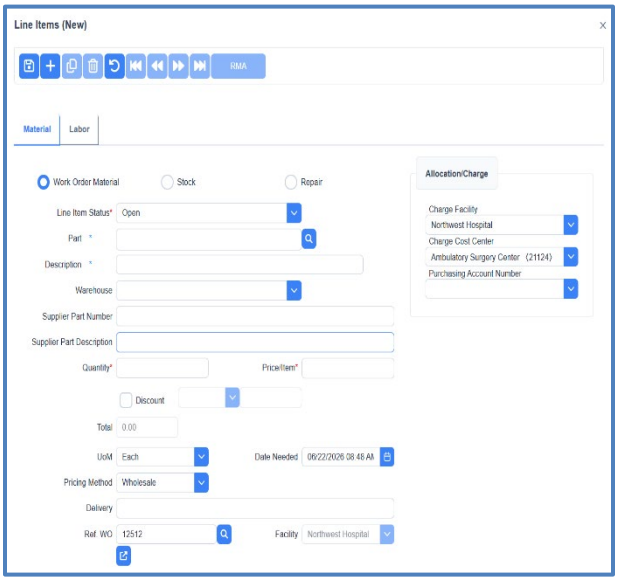

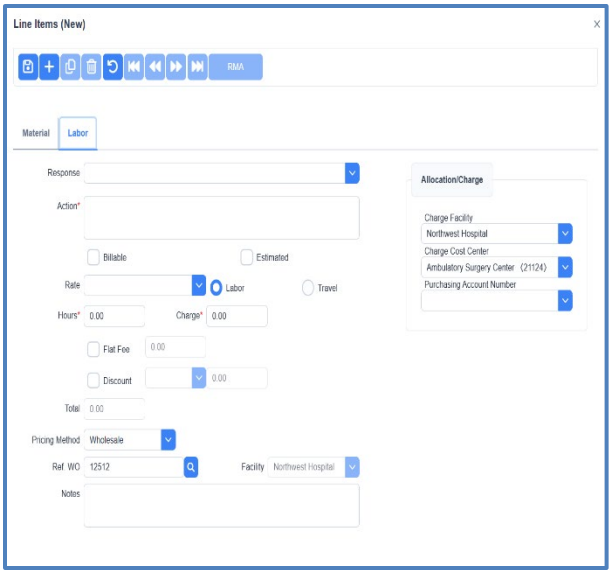

If the User needs to search for the request, they can click the "Search button," fill in the search criteria, and select the Purchase Request(s) they need.

Line Items

Line items can include Parts or Labor. The Parts can be from the Parts component, or they can be manually entered "on-the-fly." Should an "on-the-fly" Part get converted to a record in the Parts component, it can be edited to reflect the new entry. Labor can be requisitioned as well, such as Managed Services. The time should appear in the Line Item how it is expected to appear in the Work Order. This includes the Response and Action fields.

CLASSIFICATION: FOR PUBLIC USE

Line-Item Parts

To enter a Part as a Line Item, the User must click the Add Button under the Line Items tab. This will prompt a pop up. For Parts, the User can enter the Part Number in the Part field. If the part is not already added to the system or if this is a Material which will not be added to the system, the User can simply add in a Description.

Note: Users can enter temporary information in this area and can be changed later either on the Work or Purchase Orders.

Note: Part and Description are accompanied by a blue asterisk. This means either one of the fields has to be completed in order to add the line to the Purchase Request.

Once the Part information is entered, if is recommended the User select a Warehouse for the Part's destination. This will help with the receiving process. After this, the User must enter a Price Per Item (if not filled automatically) and a Quantity. The referenced Work Order is automatically filled in but could be changed if needed. Clicking the Save button adds the line to the Purchase Request. After all Line Items are completed, the User must click the Save button to save the Purchase Request, and the Materials will be added to the Work Order.

Line-Item Labor

To enter a Line Item for Labor, the User must click the Add Button under the Line Items tab. This will prompt a popup. The User must then click on the Labor tab. The User must enter the Labor as they want it to appear on the Work Order, starting with Response and Action. They can declare the Labor as Billable. Next the Rate needs to be set and declare whether the Labor is "Labor" or "Travel." The purchased number of hours must be filled in as well as the Charge and whether it is a Flat Fee or not. The ability to give a Discount as a dollar amount or percentage is available, if needed. If the exact dollar amount is not available, the User can declare the amount as "Estimated." Then the User can declare the

CLASSIFICATION: FOR PUBLIC USE

Purchasing Pricing Amount. The Reference Work Order Number field should automatically be filled in but can be changed. Finally, a Notes field is available to describe the nature of the procurement.

After the Line Items have been entered Users should review the Expansion Fields to ensure there are no required fields to be completed.

Saving the Purchase Request is the final step.

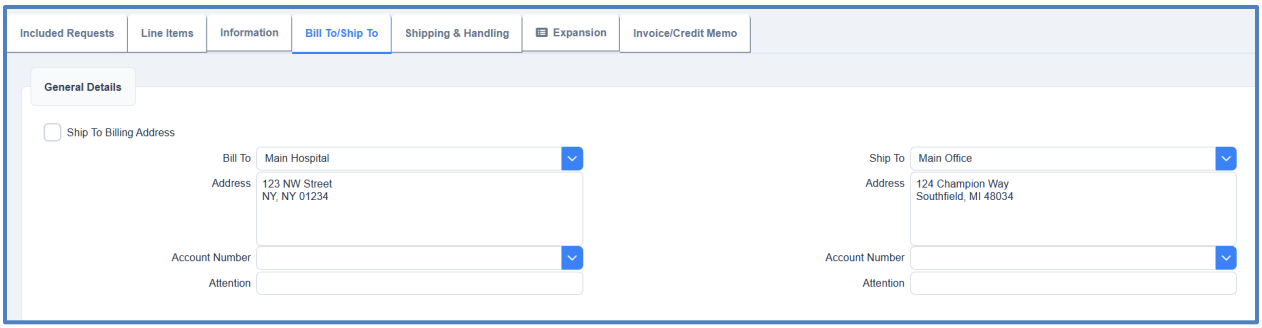

Note: All Labor Line-Item Entries will be defaulted to 1 hour but can be changed if needed.

Information/Attachments

The Information tab includes the Attachments grid contains. This grid contains all files and photos pertaining to this Purchase Order. Click the New button to add a new file. Under File Details, click the Browse button and locate the file to be added or drag the file from a file explorer. Administrators can add an optional description. If it is an image file, it can be selected as the default image under the list of files.

Bill To/Ship To

The Bill To/Ship To tab contains information on how the PO will be billed and where the Parts will be shipped. If set in the Purchasing Options in System Setup, these may automatically fill in. More addresses can be added through Data Managers->Purchasing Bill To/Ship To. An additional option is provided to copy the Ship To address from Bill To.

Shipping & Handling

Most of the fields in this tab are free text, including:

- Handling Fee
- Insurance
- Tracking Number
- Estimated Freight
- Freight
- Box Count
- Weight

CLASSIFICATION: FOR PUBLIC USE

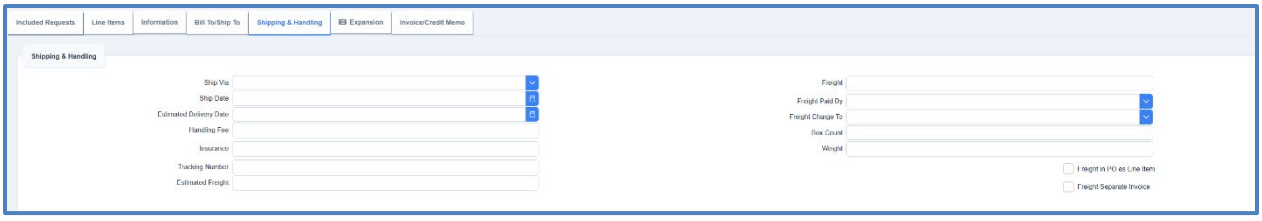

It also includes two date fields:

- Ship Date
- Estimated Delivery Date

Ship Via comes from Data Managers and should be set by default. Freight Paid By has two choices, Buyer or Seller. Freight Charge To allows the User to designate which Cost Center should be billed.

Two additional options are found on the lower right of the screen:

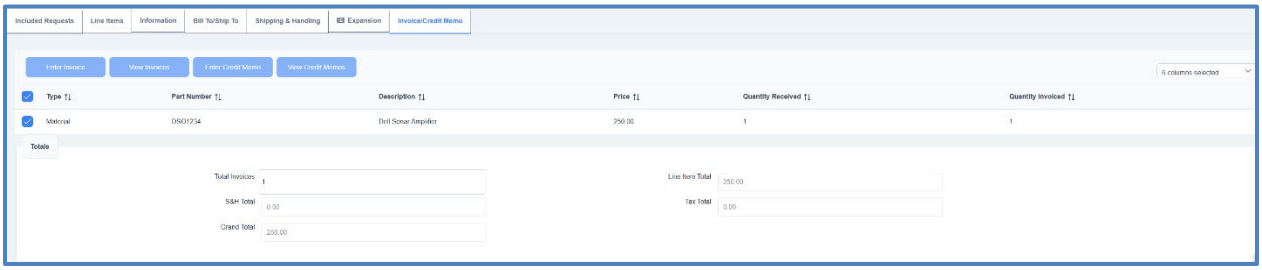

- Freight in PO as Line Item
- Freight Separate Invoice

Invoice/Credit Memo

Users can enter an Invoice the Purchase Order and/or request Credit Memos. However, this is not required for many workflows. When clicking this tab, the User will be presented with a list of Line Items. There is a Column Selector in the upper right corner to remove or add additional information to the grid.

Note: Invoicing and Crediting must be separate transactions.

CLASSIFICATION: FOR PUBLIC USE

Invoicing

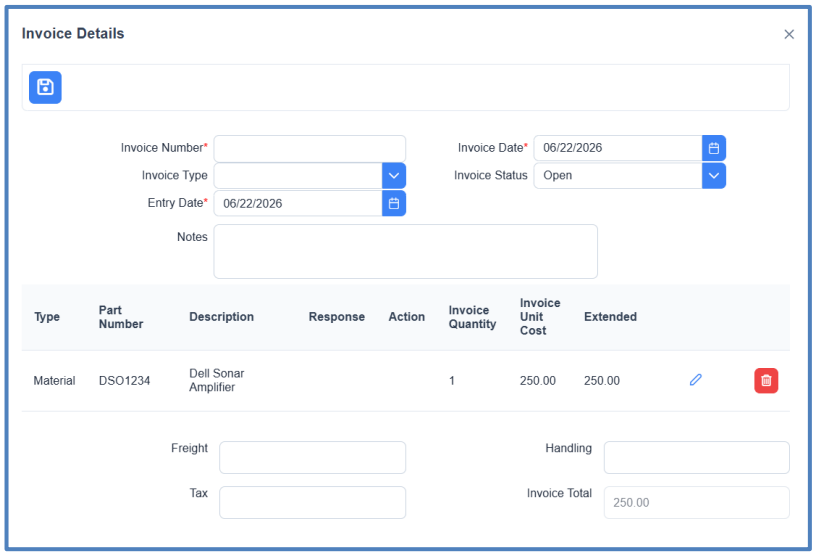

To invoice a Line Item, the User must select the items using the checkboxes on the left. Users are allowed to only check items which haven't been fully invoiced previously. When invoicing-eligible records have been selected, the "Enter Invoice" button will illuminate. Clicking the button will present the User with a popup. The required fields are:

- Invoice Number
- Status

Other fields include:

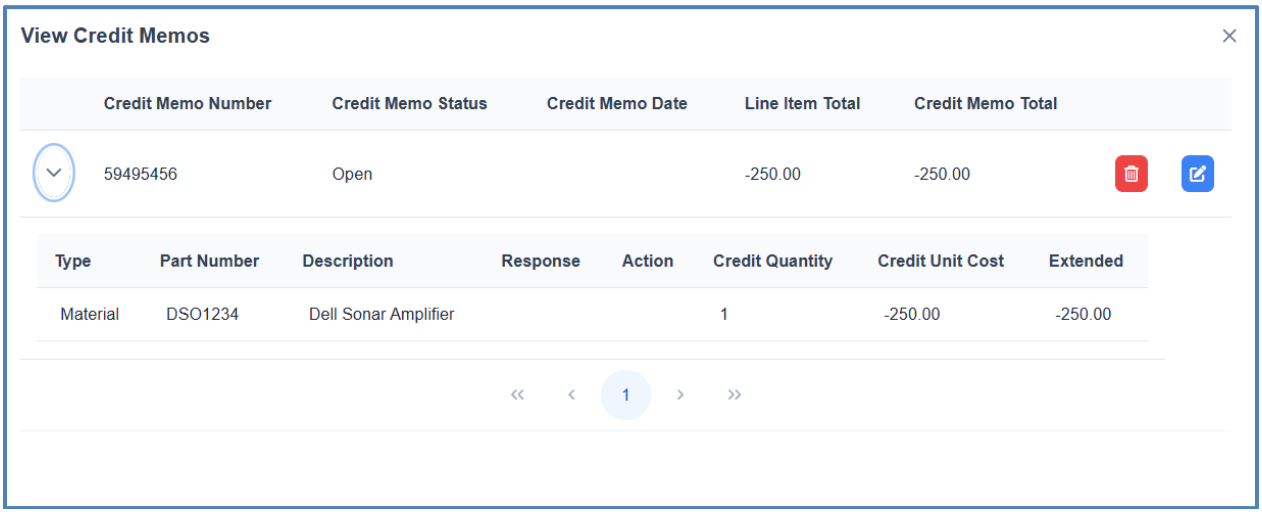

- Invoice Date
- Invoice Type
- Entry Date
- Notes
- Freight
- Handling
- Tax

If the full amount of items are not to be invoiced or the cost has changed, the User can click the edit button on the line and enter the correct amount of either field.

Credit Memos

To enter a Credit Memo, the User must select the items using the checkboxes on the left. Users are allowed to only check items which have been invoiced previously. When credit memo-eligible records have been selected, the "Enter Credit Memos" button will illuminate. Clicking the button will present the User with a popup. This includes all of the items selected.

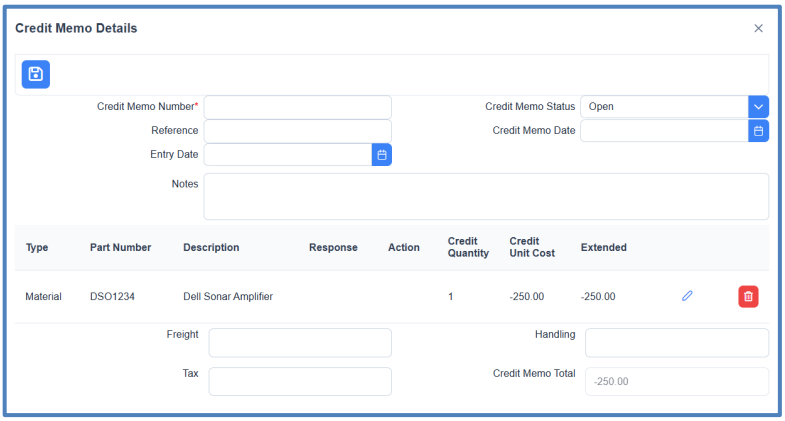

CLASSIFICATION: FOR PUBLIC USE

The user can click the edit button next to the Line Item they want to Credit. This will produce another popup which is like the Invoicing window.
The required fields are:

- Credit Memo Number
- Reference

Other fields include:

- Credit Memo Status
- Credit Memo Date
- Entry Date
- Notes
- Freight
- Handling
- Tax

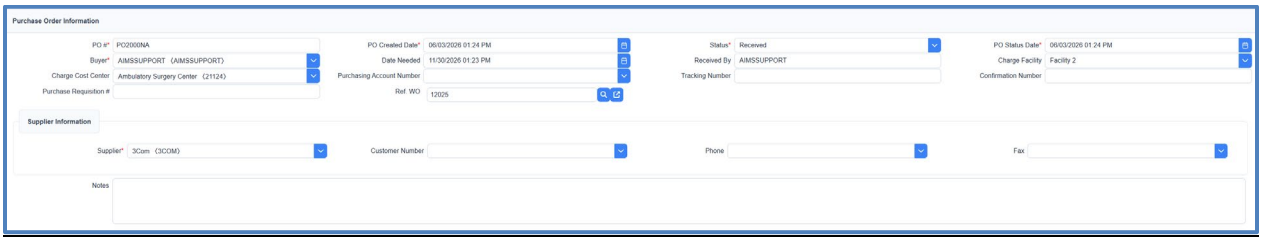

If the full amount of items is not to be credited or the cost has changed, the User can click the edit button on the line and enter the correct amount of either field.

CLASSIFICATION: FOR PUBLIC USE

Creating Stock Purchase Orders

This section will review creating a Stock Purchase Order. After selecting the Purchasing module in the menu on the left, users can view Purchase Orders by selecting the "Purchase Order" submenu. The User then clicks the "New" button to bring up a blank form.

Purchase Order Information

The Purchase Order Information section will be partially completed with certain information from the System Setup->Purchasing Options Defaults. The User can additionally enter:

- PO# - If sequential numbering is not turned on, the user must enter a unique identifier.
- Status – This should default; however, if blank, the user must set this field.
- Supplier – Shows the Supplier from which the Materials will be purchased.
- Buyer – Shows who placed the order. This can automatically be set up using Data Managers->Employee Settings.
- Date Needed – This could be inherited from Purchase Requests but can also be manually set.
- Received By – A free text field to show who received the PO.
- Tracking Number – When the PO is ordered, this field can show the shipping tracking number.
- Confirmation Number – This could hold any confirmation number provided by the Supplier.
- Purchase Requisition Number – This can be an alternate number for the PO.
- Notes – This holds any administrative notes regarding the PO.

Note: to see the full list and break down of each section please refer back to pages 22 & 23.

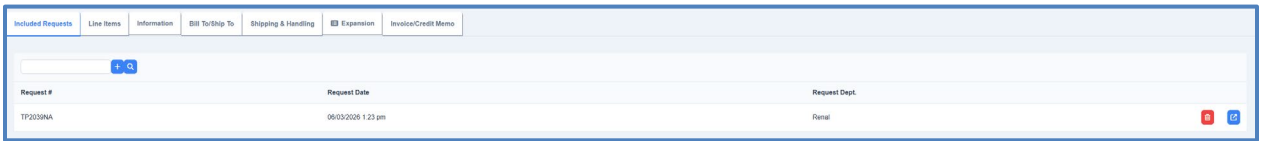

Underneath the Purchase Order Information are additional tabs:

- Included Requests
- Line Items
- Information
- Bill To/Ship To
- Shipping and Handling
- Expansion
- Invoice/Credit Memo

CLASSIFICATION: FOR PUBLIC USE

Included Requests

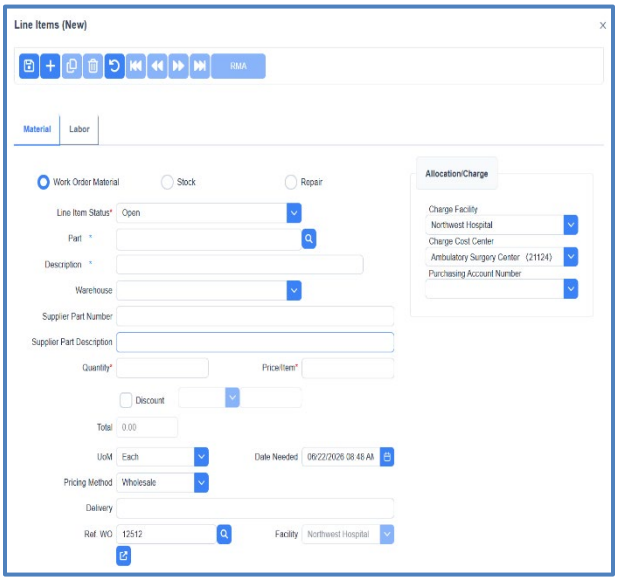

After an initial save of the Purchase Order, Included Requests can then be entered into the Purchase Order. Purchase Request numbers can be typed into the blank field and then the User clicks the "Add" button to add the request to the order.

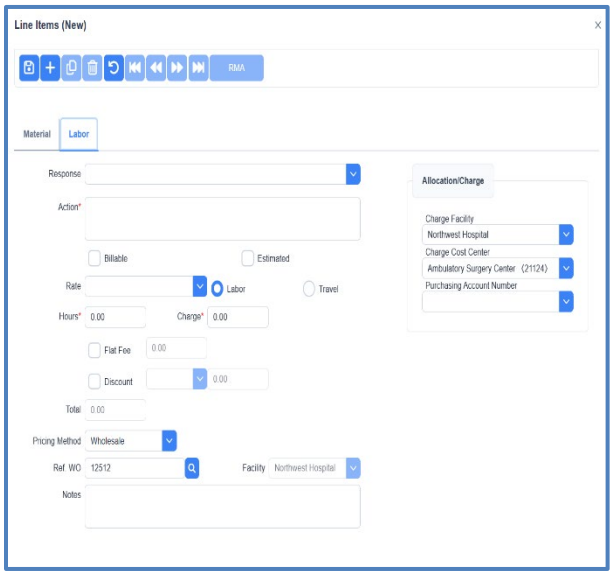

If the User needs to search for the request, they can click the "Search button," fill in the search criteria, and select the Purchase Request(s) they need.

Line Items

Line items can include Parts or Labor. The Parts can be from the Parts component, or they can be manually entered "on-the-fly." Should an "on-the-fly" Part get converted to a record in the Parts component, it can be edited to reflect the new entry. Labor can be requisitioned as well, such as Managed Services. The time should appear in the Line Item how it is expected to appear in the Work Order. This includes the Response and Action fields.

Line-Item Parts

To enter a Part as a Line Item, the User must click the Add Button under the Line Items tab. This will prompt a pop up. For Parts, the User can enter the Part Number in the Part field. If the part is not already added to the system or if this is a Material which will not be added to the system, the User can simply add in a Description.

Note: Users can enter temporary information in this area and can be changed later either on the Work or Purchase Orders.

CLASSIFICATION: FOR PUBLIC USE

Note: Part and Description are accompanied by a blue asterisk. This means either one of the fields has to be completed in order to add the line to the Purchase Request.

Once the Part information is entered, if is recommended the User select a Warehouse for the Part's destination. This will help with the receiving process. After this, the User must enter a Price Per Item (if not filled automatically) and a Quantity. The referenced Work Order is automatically filled in but could be changed if needed. Clicking the Save button adds the line to the Purchase Request. After all Line Items are completed, the User must click the Save button to save the Purchase Request, and the Materials will be added to the Work Order.

Line-Item Labor

To enter a Line Item for Labor, the User must click the Add Button under the Line Items tab. This will prompt a popup. The User must then click on the Labor tab. The User must enter the Labor as they want it to appear on the Work Order, starting with Response and Action. They can declare the Labor as Billable. Next the Rate needs to be set and declare whether the Labor is "Labor" or "Travel." The purchased number of hours must be filled in as well as the Charge and whether it is a Flat Fee or not. The ability to give a Discount as a dollar amount or percentage is available, if needed. If the exact dollar amount is not available, the User can declare the amount as "Estimated." Then the User can declare the Purchasing Pricing Amount. The Reference Work Order Number field should automatically be filled in but can be changed. Finally, a Notes field is available to describe the nature of the procurement.

After the Line Items have been entered Users should review the Expansion Fields to ensure there are no required fields to be completed.

Saving the Purchase Request is the final step.

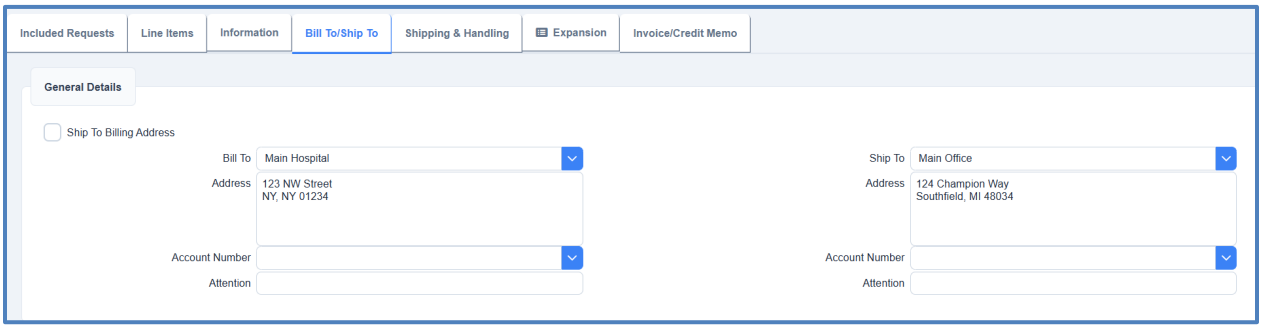

Information/Attachments

The Information tab includes the Attachments grid contains. This grid contains all files and photos pertaining to this Purchase Order. Click the New button to add a new file. Under File Details, click the Browse button and locate the file to be added or drag the file from a file explorer. Administrators can add an optional description. If it is an image file, it can be selected as the default image under the list of files.

CLASSIFICATION: FOR PUBLIC USE

Bill To/Ship To

The Bill To/Ship To tab contains information on how the PO will be billed and where the Parts will be shipped. If set in the Purchasing Options in System Setup, these may automatically fill in. More addresses can be added through Data Managers->Purchasing Bill To/Ship To. An additional option is provided to copy the Ship To address from Bill To.

Shipping & Handling

Most of the fields in this tab are free text, including:

- Handling Fee
- Insurance
- Tracking Number
- Estimated Freight
- Freight
- Box Count
- Weight

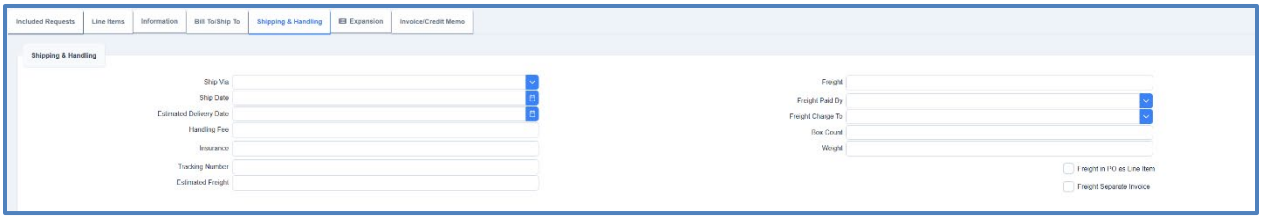

It also includes two date fields:

- Ship Date
- Estimated Delivery Date

Ship Via comes from Data Managers and should be set by default. Freight Paid By has two choices, Buyer or Seller. Freight Charge To allows the User to designate which Cost Center should be billed.

Two additional options are found on the lower right of the screen:

- Freight in PO as Line Item
- Freight Separate Invoice

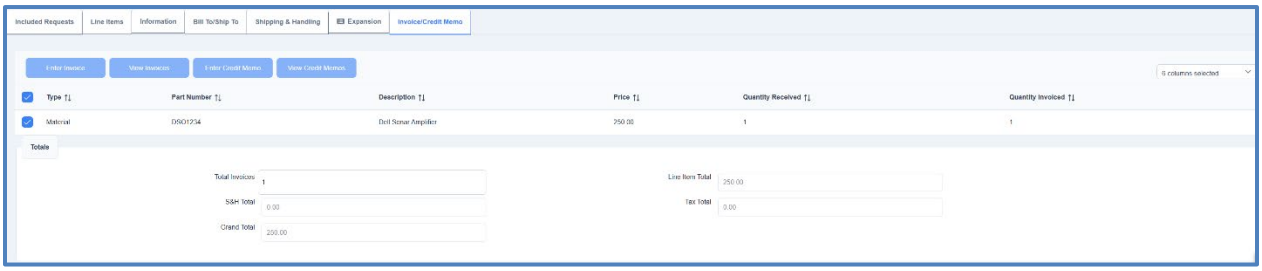

CLASSIFICATION: FOR PUBLIC USE

Invoice/Credit Memo

Users can enter an Invoice the Purchase Order and/or request Credit Memos. However, this is not required for many workflows. When clicking this tab, the User will be presented with a list of Line Items. There is a Column Selector in the upper right corner to remove or add additional information to the grid.

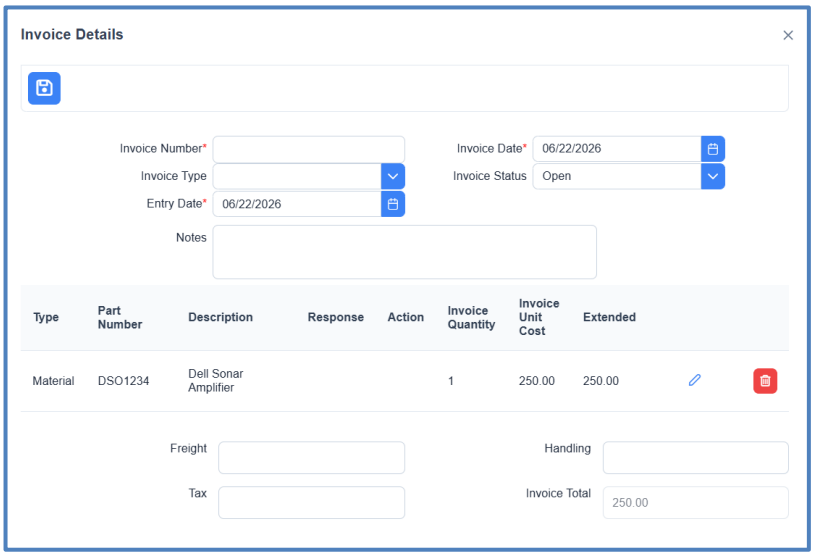

Note: Invoicing and Crediting must be separate transactions.

Invoicing

To invoice a Line Item, the User must select the items using the checkboxes on the left. Users are allowed to only check items which haven't been fully invoiced previously. When invoicing-eligible records have been selected, the "Enter Invoice" button will illuminate. Clicking the button will present the User with a popup. The required fields are:

- Invoice Number
- Status

Other fields include:

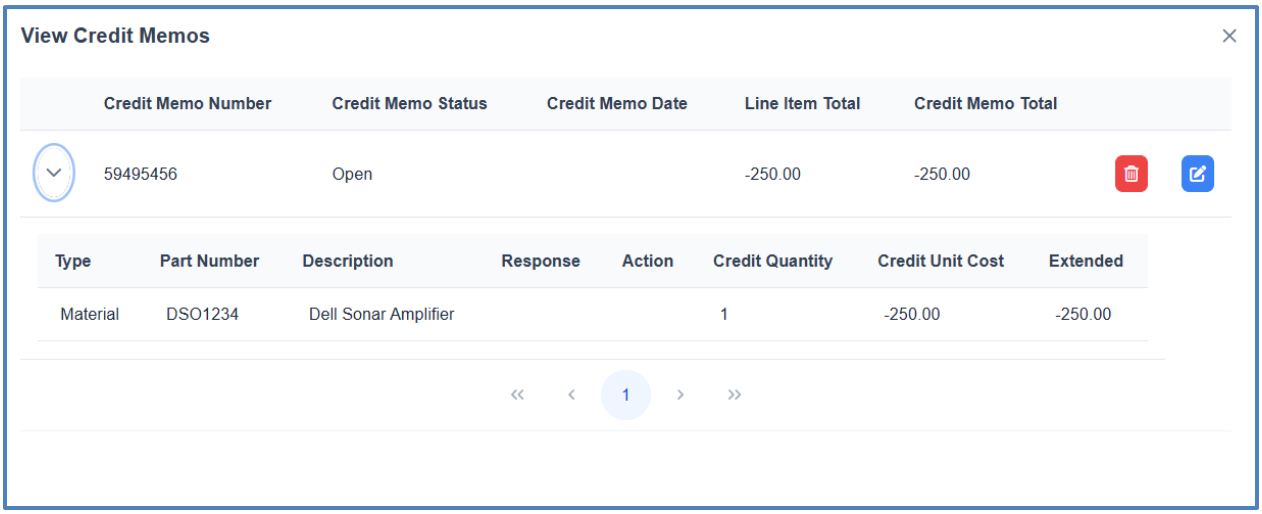

- Invoice Date
- Invoice Type
- Entry Date
- Notes

- Freight
- Handling
- Tax

If the full amount of items are not to be invoiced or the cost has changed, the User can click the edit button on the line and enter the correct amount of either field.

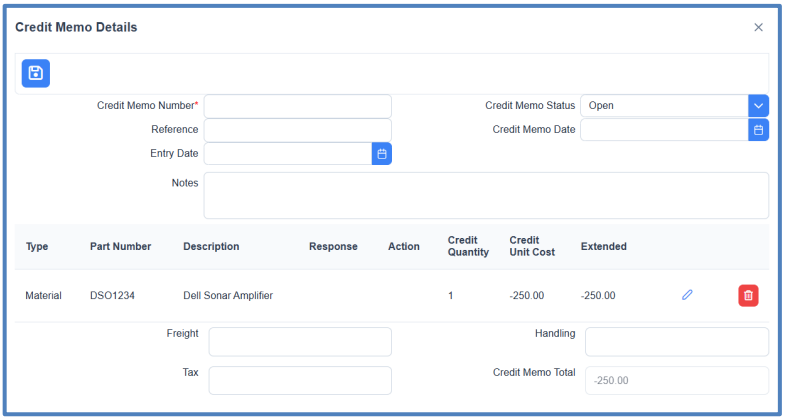

Credit Memos

To enter a Credit Memo, the User must select the items using the checkboxes on the left. Users are allowed to only check items which have been invoiced previously. When credit memo-eligible records have been selected, the "Enter Credit Memos" button will illuminate. Clicking the button will present the User with a popup. This includes all of the items selected.

The user can click the edit button next to the Line Item they want to Credit. This will produce another popup which is like the Invoicing window.
The required fields are:

- Credit Memo Number
- Reference

Other fields include:

- Credit Memo Status
- Credit Memo Date
- Entry Date
- Notes
- Freight
- Handling
- Tax

If the full amount of items is not to be credited or the cost has changed, the User can click the edit button on the line and enter the correct amount of either field.

Reviewing/Approving Purchase Orders

After Purchase Order are created, they are then reviewed, and the order is placed. Purchase Orders can contain several Line Items. These items will eventually be invoiced are credited.

Depending on the organization's workflows, the process for reviewing Purchase Orders can differ greatly. It is important for all Users to understand what limitations (if any) has been placed upon them in the software. The two major methods to submit Purchase Orders are:

- Reviewing Purchase Orders WITHOUT needing Approval, and
- Reviewing Purchase Orders WITH needing Approval

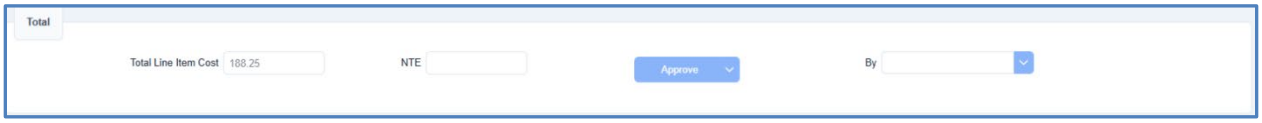

Reviewing Purchase Orders WITHOUT needing Approval

To review an order without needing Approval, the Reviewer inspects the Purchase Order for accuracy. After a Purchase Order has been reviewed, it is important for the Reviewer to click the "Place Order" button. This should automatically change the status to the appropriate status. These statuses can be reviewed under Data Managers->Purchase Request Status.

Reviewing Purchase Orders WITH needing Approval

Before a Purchase Order can be approved, Approvers need to be established in the Employees Data Manager.

To review an order with needing Approval, the Reviewer inspects the Purchase Request for accuracy. If the Line Items are approved for purchase, the Reviewer must click on the Line Items tab and click the "Approve" button.

After a Purchase Request has been approved, it is important for the Reviewer to click the "Place Order" button. This should automatically change the status to the appropriate status. These statuses can be reviewed under Data Managers->Purchase Request Status.

CLASSIFICATION: FOR PUBLIC USE

Receiving Purchase Orders

Purchase Orders can be fully or partially received after being created. This can be done with the buttons in the toolbar. Receiving a Purchase Order partially or fully will automatically change the status of the Purchase Order to whichever settings were programmed in the System Setup->Purchasing Options section. In addition, the Work Order (if applicable) will change its status to reflect whether the Purchase Order was partially or fully received. When the Purchase Order is fully received the Purchase Order Information fields will grey out, except for the Status field. This is to allow Users to reopen Purchase Orders, if needed.

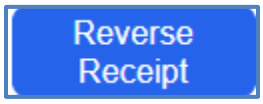

Receiving Items With the Taskbar Buttons

When in a Purchase Order, the User can receive Line Items with the taskbar buttons “Receive All” or “Receive Partial.” If the User clicks “Receive All,” they will be presented with a popup message asking, “Are you sure you want to mark all parts as received?” with a “Yes” and “No” button. If the User clicks “Yes,” the program will receive all items and change the status to “Closed.”

If the User selects “Receive Partial,” they will be presented with all outstanding Line Items. By clicking the “Edit” button on the right end of each line, the User can enter how many of each item they would like to receive. Clicking the Save button updates the number received to the Purchase Order.

Reverse Receipt

Reverse Receipt is a corrective action that lets users adjust how many units of an item were originally recorded as received. Instead of deleting or overwriting the initial entry, the system creates a dedicated reversal transaction that cleanly offsets the original quantity. This allows users to fix over-receipts, remove items that were damaged or returned, or correct data entry mistakes while preserving a complete audit trail. When a reversal is submitted, the system automatically updates inventory levels, recalculates any related costs, and synchronizes with connected workflows such as purchase orders or invoices. By handling corrections through a structured reversal rather than manual edits, Reverse Receipt ensures accurate records, traceable adjustments, and consistent downstream processing.

Closing Purchase Orders

After all items have been received which is going to be received, Users should close the Purchase Order. This can happen on of two ways:

- Using the Close button
- Automatically closing the Purchase Order

Using the Close button

This workflow mimics how Work Orders are closed. The user cannot close the Purchase Order from the Status field. The Work Order must be closed by clicking the "Close" button. After clicking the button, the User is presented with a popup, like Work Orders. The User should choose the correct status and click the "Close" button.

Automatically Closing the Purchase Order

In the Purchase Options in the System Settings is an option to "Auto Close PO when all Line Items are Invoiced." Selecting this option will automatically close the order when all items have been invoiced or credited.

Note: This option is only for invoicing and not receiving!

Conclusion

The Purchasing components of AIMS3 enable Administrators to accurately record costs of ordered Parts and Labor on Work Orders. It is vital strong workflows are established to successfully record everything needed to maintain compliance and patient safety while staying in budget.

If Administrators require additional consulting or training, Phoenix Data Systems is available to assist at any level. Please contact our Sales Department or Project Managers for more information.
