Overview

Reports allow organizations to turn data entered into AIMS 3 into organized and meaningful information. Reports can be accessed through the Reports component as well as throughout other areas of the software, including Equipment, Work Orders, Purchase Requests, Purchase Orders, and more.

Many reports can be saved as a Macro, which remembers report selections and settings, making it easy to run the same report again with different criteria. Report results can be printed or exported in several formats. Some reports also include an Excel-Friendly option for users who prefer to analyze data in Microsoft Excel.

Reports can be created or modified using either the web-based report designer or a desktop report designer. While not required, experience with SQL or reporting tools such as Crystal Reports or SSRS can be helpful when creating custom reports. Training is available for organizations that need assistance building or customizing reports.

When reviewing and analyzing data in AIMS 3, there are several available options:

- **Exports** – Best for obtaining raw data that can be sorted, filtered, and analyzed in spreadsheet applications.
- **Reports** – Best for presenting data in a structured and professional format. Some reports also include an Excel-Friendly option for additional analysis.
- **Dashboards** *(coming soon)* – Designed to provide real-time insights and help users monitor day-to-day operations and key performance indicators.

CLASSIFICATION: FOR PUBLIC USE

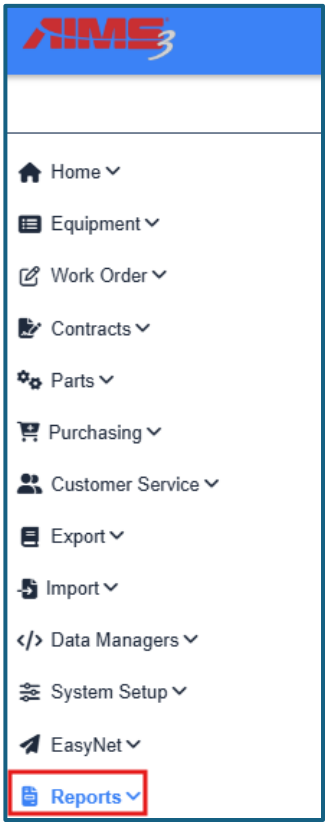

AIMS 3 Reporting Terminology

- **Pre-Built Report –** Also known as a "Canned Report," these reports are provided by Phoenix Data Systems and are always available in the Select Pre-Built library, even if they have been deleted from the system.
- **Custom Report –** Reports created or customized by the organization. These reports are not available in the Select Pre-Built library and must be restored using the original Report Definition File.
- **Parameter –** A filter used to limit the data displayed on a report. Parameters allow users to select specific criteria before running a report.
- **Parameter Auto-Refresh –** When enabled, the report automatically updates whenever a parameter selection is changed**.**
- **Parameter Pane –** The panel located on the right side of the Report Viewer that contains the report's available parameters and filters.
- **Report Definition File –** The file created by the web or desktop report designer. These files use the. TRDP extension and are the only file type that can be uploaded into the Reporting component.
- **Reporting Component –** The main area where most reports are run and maintained. It is accessed from the Reports option on the Main Menu.
- **Report Navigation –** Features used to move through a report. This may include:
    a. Moving between report pages.
    b. Using a navigation section that provides shortcuts to report sections.
    c. Using a table of contents that links directly to specific areas of the report.
- **Selection –** A value chosen within a parameter that determines which data is included in the report.
- **Selection Default –** The value or values automatically selected when a report first loads. This is typically the first available selection of all available selections.
- **Master Report –** A component-specific report that is run directly from an AIMS 3 module, such as Equipment or Work Orders, rather than from the Reporting component.

CLASSIFICATION: FOR PUBLIC USE

Reporting Component

The Reporting component of AIMS 3 is accessed via the component menu.

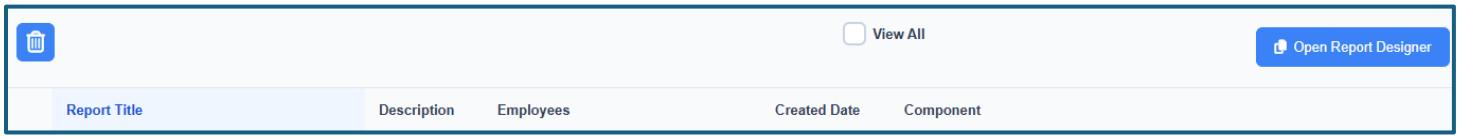

The Reporting component provides the following functionality:

1. **Run Reports** - All reports except component-specific "Master" reports are run here
2. **Locate Reports** - Filters and sorting via the grid headers make it easy to find a report which will fit the present needs
3. **Upload reports** - Reports created outside of AIMS 3 can be imported here
4. **Report Security** - Reports can be restricted to certain employees or available to all
5. **Report Design** - Reports can be created or modified using the web-based report designer
6. **Report Availability** - The report grid can be kept clean by getting rid of reports which are not used, and can be re-activated when the need arises
7. **Editing the Report listing** - The name, description, component(s), and security can be edited

CLASSIFICATION: FOR PUBLIC USE

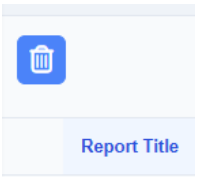

Report Selector

The Report Selector provides for the selection and editing of all non-master reports.

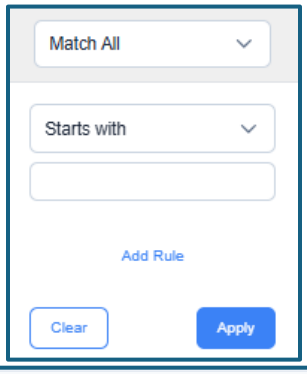

- **Report Title** – Name of the Report
- **Description** – The contents and use of the report
- **Employees** – Shows which employee can view/who created the report
- **Created Date** – The day the report was added to the Report Selector
- **Component** – AIMS 3 Component from which the report draws its data

Report Selector Functionality

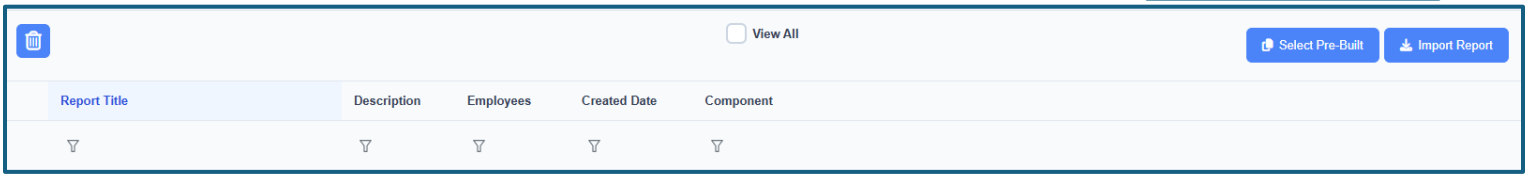

Delete Report – reports are deleted by checking the box of the report to delete and clicking on the Trash Can or the Delete Button. Reports which have been deleted can be reactivated from the Select Pre-Built function. Custom reports by importing them.

Column Header Sort - Clicking on any of the Column Headers will cause the grid to be sorted by that column; a subsequent click reverses the sort direction.

Report Filter - Reports can be located by clicking on the Filter button underneath the Column Header of the report attribute for which to search, entering the search text, modifying the search type as needed, and clicking Apply.

View All – Displays all reports in the report list, including non-global reports that are not assigned to you. Administrators can always use this option, while non-Administrators must be granted permission through their Security Profile.

Open Report Designer – Opens the Telerik web-based Report Designer, allowing users to create new reports or modify existing ones.

Select Pre-Built – Opens a list of Phoenix Data Systems pre-built reports that can be activated and added back to the report list when needed.

CLASSIFICATION: FOR PUBLIC USE

Import Report – Allows users to import a report using a Report Definition File (.TRDP). During the import process, the report can be named, described, categorized, and secured.

Edit Report – Opens the report settings so users can update the report's name, description, category, and security permissions.

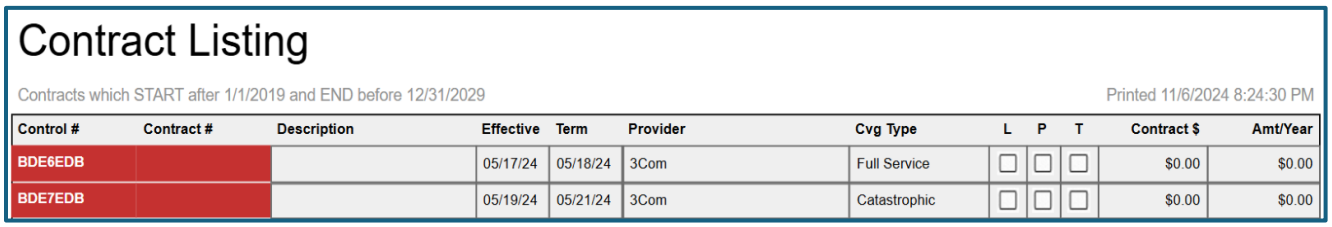

View Report – Opens the selected report in the Report Viewer in a separate browser window, allowing the report to be run and reviewed.

Report Viewer

The report viewer is a pop-out with three major sections.

Toolbar - Provides the ability to control the viewing and exporting of the report.

Contract Listing

Contracts which START after 1/1/2019 and END before 12/31/2029 — Printed 11/6/2024 8:24:30 PM

Control #	Contract #	Description	Effective	Term	Provider	Cvg Type	L	P	T	Contract $	Amt/Year
BDE6EDB			05/17/24	05/18/24	3Com	Full Service	☐	☐	☐	$0.00	$0.00
BDE7EDB			05/19/24	05/21/24	3Com	Catastrophic	☐	☐	☐	$0.00	$0.00

Report Viewing Area – The report is displayed in this area.

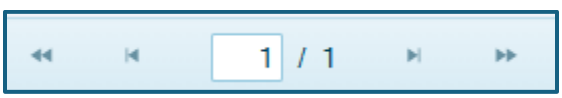

Toolbar Buttons

Undo/Redo – Allows for undoing and redoing selections made in the Parameters Pane.

Clear/Refresh – Allows for users to clear their selections or refresh their reports.

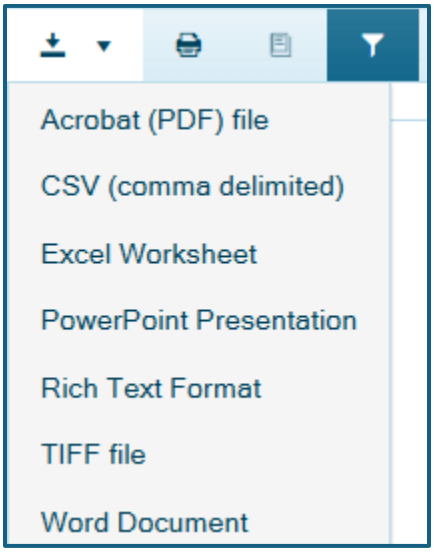

Page Navigation

- << / >>. Go to first page / last page
- < / >. Go to previous / next page
- x / y. Number of current page (x) / total number of pages (y); enter a new page number and click enter to navigate to that page

CLASSIFICATION: FOR PUBLIC USE

Toggle Print Preview - By default, page breaks are not shown (this button does not appear "pressed"). Click to show the page breaks (button will appear "pressed"); also make sure print preview is on ("pressed") to get accurate document navigation.

Download or Print:

- Download – Download format selection
- Print – Bring up the Print Dialogue box.

Filter – Toggles the selections pane on the right between shown or hidden.

Zoom – Zoom in and out in the report

Toggle Full Page/ Page Width

CLASSIFICATION: FOR PUBLIC USE

Search – Brings up a text search box for searching within the report.

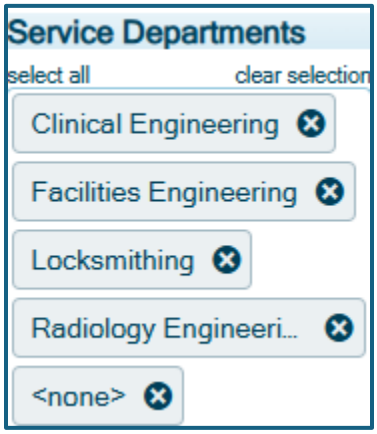

Parameter Selection Types

Date Selector – Allows users to select a date range for the report.

Multi-Select – Allows users to select of one or more options

- **Select All** – Selects all records in the multi-select list
- **Clear Selection** – Un-Selects all records in the multi-select list

Single-Select – Allows selecting only one item

Text Entry – Allows for text to be entered and used in filtering the dataset

Report Selection Defaults and Auto – Refresh

On all Pre-Built Reports, parameter selections are assigned default values whenever possible so the report can run immediately. These defaults are based on how the report is typically used. For more complex reports, meaningful defaults may not be available. In these cases, the report may display a "Missing or Invalid Parameter Value" message until the required selections are made.

Each parameter can be configured with Auto-Refresh. When Auto-Refresh is enabled, the report and any related parameters are refreshed automatically whenever a selection is changed. If one or more parameters have Auto-Refresh disabled, a Preview button will appear at the bottom of the Parameter Pane. The report will not run until the user clicks Preview, indicating they are ready to view the results.

If all required parameters have Auto-Refresh enabled, the report will run automatically once valid selections have been made for all required fields. In some cases, users may need to click outside the field or press Tab to trigger the refresh.

Reports Macros

Many reports are run repeatedly using the same or similar selections. The Macro feature saves time by remembering report filters and allowing users to quickly rerun reports without having to re-enter the same selections.

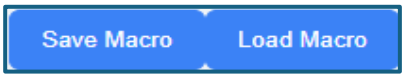

CLASSIFICATION: FOR PUBLIC USE

1. **Save Macro** – Opens a window where users can name the Macro and determine who can access it. Once saved, the current report selections are stored and can be reused in the future.
2. **Load Macro** – Displays a list of saved Macros for the selected report. Choosing a Macro loads the saved selections and runs the report using those settings.

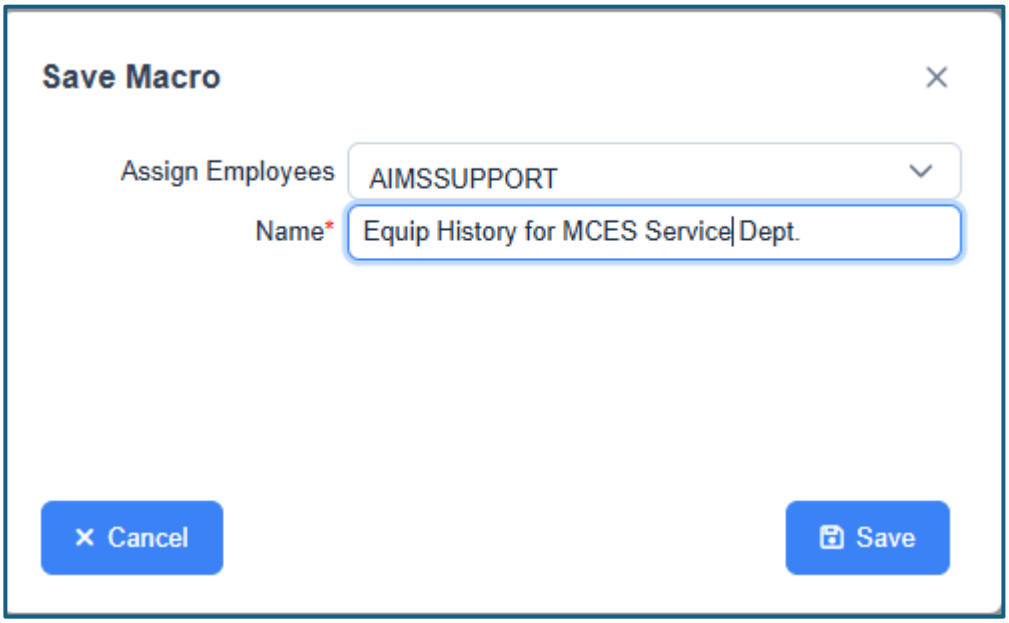

Using Report Macros

Saving a Macro

- Run the target report, making the selections desired in the Macro
- Click the "Save Macro" button on the upper-right of the Report Viewer

- Select the Employees for which to give access to the report (including yourself)
- Provide a Macro name that corresponds with the parameters selected
- Click Save

Loading a Macro

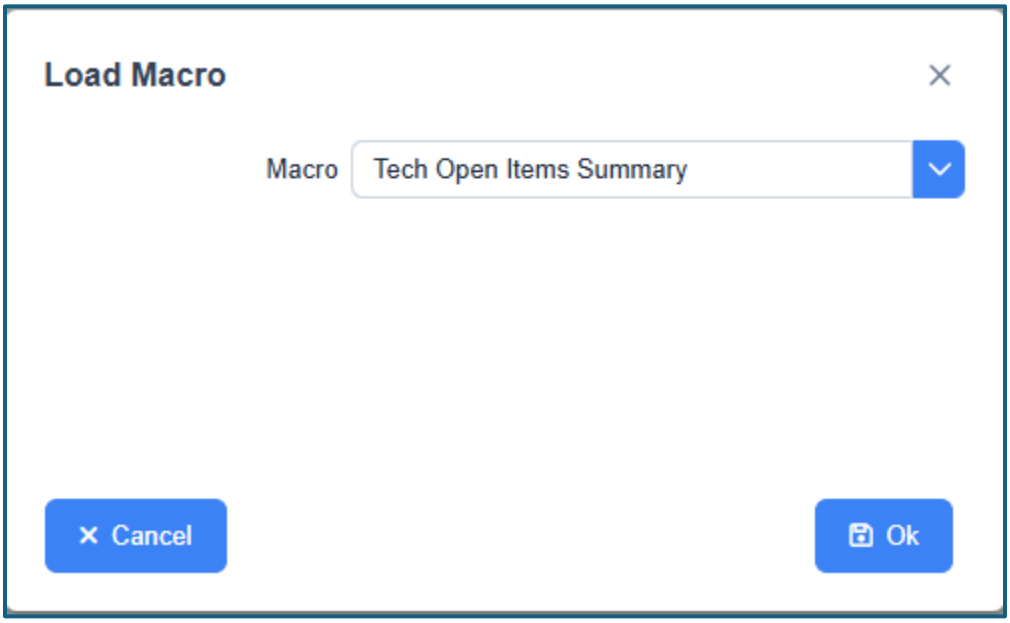

- Select the target report

CLASSIFICATION: FOR PUBLIC USE

- Click on the “Load Macro” button on the upper-right of the Report Viewer

- Select the name of the Macro to use
- Click OK
- The report will run with the saved selections

CLASSIFICATION: FOR PUBLIC USE

Report Design Elements.

Pre-Built Reports have a set of design elements which are found on all the reports inside of the system.

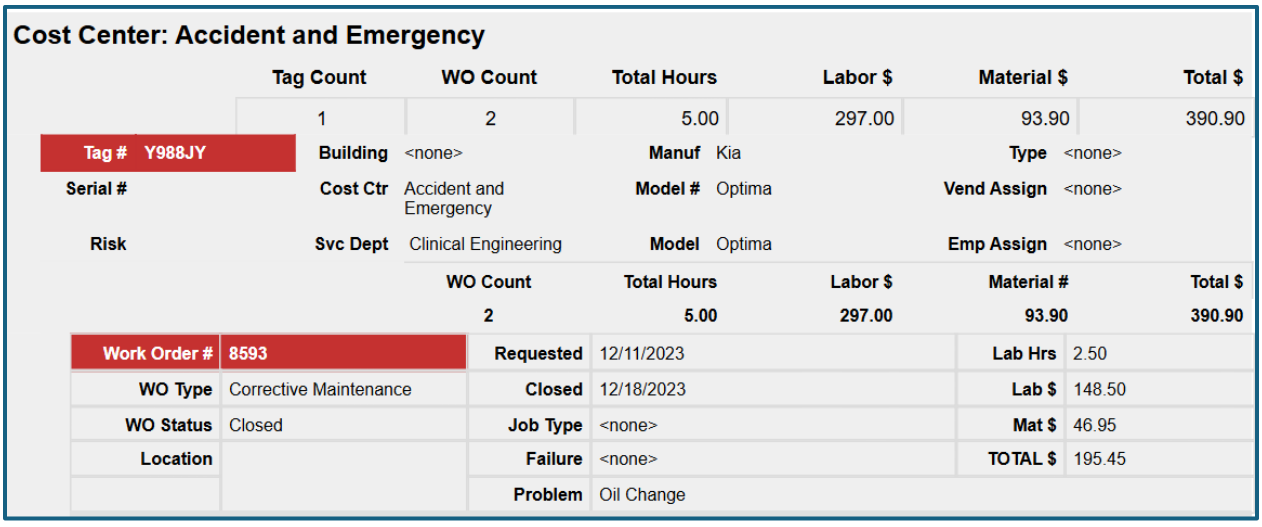

The report header, as seen above, is shown once at the beginning of the report and shows the following information.

- Title of the report
- Reporting Period
- Printed Date.

Note: The only time a Report Header will be shown is when the report is run.

Key Fields

Cost Center: Accident and Emergency

Tag Count	WO Count	Total Hours	Labor $	Material $	Total $
1	2	5.00	297.00	93.90	390.90

Tag # Y988JY	**Building** <none>	**Manuf** Kia	**Type** <none>
Serial #	**Cost Ctr** Accident and Emergency	**Model #** Optima	**Vend Assign** <none>
Risk	**Svc Dept** Clinical Engineering	**Model** Optima	**Emp Assign** <none>

WO Count	Total Hours	Labor $	Material #	Total $
2	5.00	297.00	93.90	390.90

Work Order #	8593	**Requested**	12/11/2023	**Lab Hrs**	2.50
WO Type	Corrective Maintenance	**Closed**	12/18/2023	**Lab $**	148.50
WO Status	Closed	**Job Type**	<none>	**Mat $**	46.95
Location		**Failure**	<none>	**TOTAL $**	195.45
		Problem	Oil Change		

The main body of the report contains Key Fields that identify the records being displayed. These fields help users understand the data returned by the report. In this example, the report uses the Tag Number and Work Order Number as the primary identifiers. The Key Fields shown will vary depending on the report being run and the type of data being displayed.

CLASSIFICATION: FOR PUBLIC USE

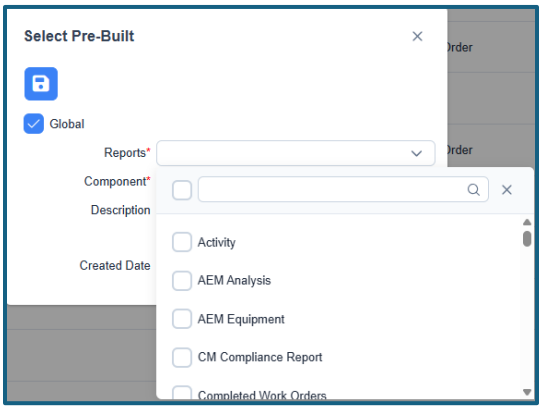

Running a Report

Select Pre-Built Report

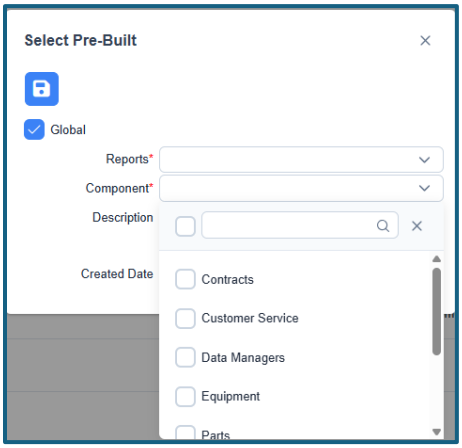

- From the Component Menu, go to Reports and on the right-hand side and choose “Select Pre-Built Reports.

- Click on the Reports drop-down
- Scroll through the reports or enter text in the search box until the desired report appears
- Select the Report or Reports (if selecting multiple, be sure to select only those which will share the same security and Components)

- Select the Component(s) where the report’s data will be drawn (this only affects how the report will be seen in the grid and has no effect on the running of the report)
- By default, the report is available Globally; if desired, uncheck this box and select the Employees which should have access to it
- Click Save

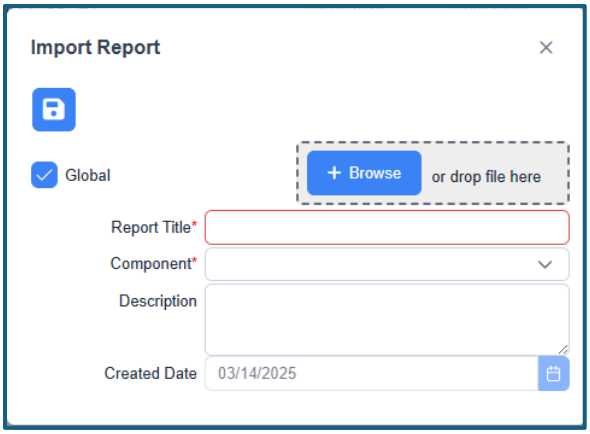

CLASSIFICATION: FOR PUBLIC USE

Importing Reports

- From the Component Menu, go to Reports
- Click on the "Import Report" button in the upper right

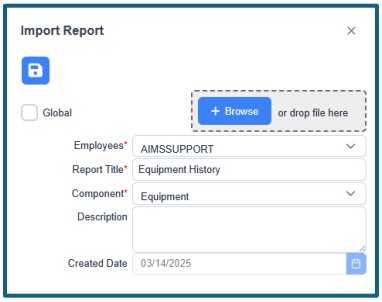

- Click the Browse button; from the file selector, select the Report Definition file from the file system selector

- The report title will be filled in based on the name of the report file; change if desired
- Select the Component(s) where the report's data will be drawn (this only affects how the report will be seen in the grid and has no effect on the running of the report)
- Enter a Description for the report if desired or required (can be made required in System Settings) • By default, the report is available Globally; if desired, uncheck this box and select the Employees who should have access to it
- Click Save; the report will appear in the grid

Editing a Report

- From the Component Menu, go to Reports
- Locate the report to edit and click the Edit button 
- To change who can access the report:
  a. If the Global checkbox is checked, uncheck it and make the Employee selections for those who should have access
  b. If the Global checkbox is unchecked, and you want to make it global (for all Employees), then check it; the previous selections will be kept, but overridden

- To change the Components selected, click on the drop-down and make new selections (this only affects how the report will be seen in the grid and has no effect on the running of the report)
- The Description can be changed by entering a new one
- Click Save when done

CLASSIFICATION: FOR PUBLIC USE

Conclusion

As important as entering data into your CMMS, being able to retrieve and analyze that data is just as critical to the success of any facility management program. Reports transform the information stored in AIMS 3 into organized, meaningful, and actionable data that can be used to support daily operations, regulatory compliance, budgeting, performance tracking, and management decision-making.

Whether you need to review Work Order history, analyze labor and material costs, track Equipment performance, monitor preventive maintenance compliance, or identify operational trends, AIMS 3 provides reporting tools to help you access the information you need. Reports can be filtered, customized, exported, and saved for future use, making it easy to review both high-level summaries and detailed record information.
